

NAME

SPLASH WIZARD INDUSTRIAL

DESCRIPTION

This controller serves as the primary control and automation center for large-scale interactive water features, managing and scheduling operations for multiple pumps, valves, lighting fixtures, and other fountain components. It incorporates water management capabilities, including water level and temperature control, and automated backwash cycles for sand filter systems.

Interactive environmental features include high-wind cut-off functionality based on sensor input, and user interaction sensors such as activation bollards and motion detectors. Network connectivity enables remote user access and control.

An optional motor control cabinet can be provided to house breakers, fuses, motor starters, Variable Frequency Drives (VFDs), and other electrical components. This centralized control approach simplifies installation and reduces end-user complexity.

SPECS

- Touchscreen user interface
- Multiple pump control
- Multiple valve control
- Water level & temp management
- User interaction sensor inputs
- Customizable for unique projects
- Remote access capable
